

# Lesson: Slicing images, rollovers, tables, cells, CSS

instructor: Daniel Ouellette

The screenshot shows the website layout with several annotations:

- h1 tag:** Points to the main heading "Cottagehaven.ca" in the header.
- h2 tag:** Points to the sub-heading "The Cottage" in the main content area.
- Nav Bar:** Labeled as "done with Photoshop", it includes the site name, a Canadian flag, the tagline "A Quiet Spot on Lake St. Peter", and navigation links like "Reservations" and "Contact".
- Content:** Labeled as "done in Dreamweaver", it contains the main text and a testimonial.
- Annotations A, B, C, D:** Small boxes with letters pointing to specific elements: A (caption), B (location text), C (introductory text), and D (testimonial text).

## Addendum

In addition to cutting up the Nav Bar into separate rollovers for each button and building and populating tables to match the layout above create an external Cascading Style Sheet to apply to the text in the content area.

### CSS Settings:

Tag styles for:

**h1:** Verdana, Bold, 24px, Red (990000)

**h2:** Verdana, Bold, 18px, Red (990000)

### Class style for sections:

**A:** Verdana, italic, 8px, Black

**B:** Verdana, 10px, Black

**C:** Verdana, 14px, Black

**D:** Verdana, 12px, Black
